LAB 5
Working With the Bootstrap Collapse

DESCRIPTION

Build upon the Collapse and Card-powered Accordion that you created in class to modify the appearance and functionality.

INSTRUCTIONS

While keeping the Bootstrap documentation page open for the Collapse component as a reference, attempt the below challenges.

☐ Add *one* more card item to the accordion, including some other content. You can generate some greeked text using a Lorem Ipsum generator if you wish (http://lipsum.com/).

☐ Try to get the `<h2>` elements inside each of the `<header>` elements to work as the toggle instead of the `<a>` elements. Remove the `<a>` elements, transferring over the `data-toggle="collapse"` attribute and value to each of the `<h2>` elements.

☐ Since you can't have an `href` on an `<h2>`, you'll have to use the `data-target` attribute, instead (you'll have to figure out what the value is).

☐ Add all the `aria-expanded` attributes and values to each of the `<h2>` elements indicating which card is expanded and which is collapsed when the page loads (look up the Bootstrap documentation for this).

☐ Change the `background-color` and the text colour of the `<h2>` for each of the card `<header>` elements using `custom.css`.

When you are finished, either show your results to the Instructor in the class, or submit the entire folder as a compressed archive directly to the Lab on Blackboard.

EVALUATION
